

10 Purification steps to convert your home or office into a vibrant, healthy environment by using the EdenPURE™ blended air treatment system.

These 10 Purification tips are designed to demonstrate immediate results and help expedite the purifying process in your home or office. These steps can provide amazing results and are well worth recommending to family and friends!

Please note that with everyday normal use, the EdenPURE™ should be located on the highest piece of furniture in your main living area.

Note: During your EdenPURE™ initial purification process you may initially get a "Bleach" smell, that's good! It tells you that the EdenPURE™ is working and the O3 is oxidizing (breaking down) the toxins, chemicals and bacteria into pure Oxygen, H2O, and Carbon Dioxide. This purification process turns your stale, toxic, sick home air into a vibrant healthy home environment.

PUT The EdenPURE™ TO THE TEST...

THREE RULES TO REMEMBER

The EdenPURE™ does not only help purify indoor air, but all your home surfaces as well. That's right, your carpets, clothes, towels, shoes, cat, dog, you, your children and the list goes on and on and on.

A. HAVE FUN! Experiment! Your EdenPURE™ is portable! Move it around! But be considerate of the other people in the house. It is rare, but occasionally some people initially do not like the smell of the Activated Oxygen and that's O.K., they eventually will. Once you sanitize and bathe your entire home with nature's cleaning elements, only a small, undetectable amount of O3 is necessary to maintain the natural level of purity. Put it through its paces and marvel at the magic of nature's purification at work indoors.

B. ALWAYS keep the back of the EdenPURE™ clear to draw air.

C. ALWAYS be watchful of the electric cord. Keep away from water, excessive heat and prevent pinching cord.

RV Vehicles - (Boats and other target items)

Have you ever taken the cover off your boat and been blown away by the musty smells? A "must do" before and after storage of your seasonal gear and camper. This step will purify your musty seasonal clothing, tenting and camping gear, as well as RVs. Do this step if you want to protect them from nasty problem smells and real potential damage from mold and mildew while your valuables are in storage.

A. Place items opened or hung up opened in front of the EdenPURE™ in a closet or storage unit. Or lay the gear out on the floor tented with a sheet leaving the back of the EdenPURE™ open for ventilation.

B. Turn the EdenPURE™ on high.

C. Allow this set-up to run for 1 to 2 hours. Let your nose be the judge.

D. For RVs, Campers, Tents and Boats, place the unit inside and make sure there is a small window or a vent open for ventilation. Leave the purifier in the unit for 2 to 24 hours depending on the severity of the mold problem.

Note: * If you are allergic to the outdoor pollen and mold that finds its way into the RV or camper at night or you are an avid camper, consider investing in a second Purifier for the road.* Remember when mold oxidizes, it smells like Chlorine. Wait for the after thunderstorm fresh air smell before removing the unit (or turning it down).

Automobiles

Keep your car smelling fresh or "detox" a new car

This step can help you reduce or eliminate that stale smell your car can get as it ages, as well as help eliminate the hazardous toxic fumes left behind in a new car or odors from a smoker or a pet passenger.

This is a single treatment that will have to be repeated again and again as fumes build up.

A. Place your EdenPURE™ on the front seat of your car.

B. Make sure the back of your EdenPURE™ is clear so you maintain good airflow through the machine.

C. Turn your car ignition to the "on" position and turn your car's heating/cooling ventilation fan on.

D. Turn your EdenPURE™ on high and fan on medium.

E. Watch the cord as you close the door or put it through the window.

F. Allow this set-up to run 1 to 2 hours or longer depending on the smells. Your nose knows.

Keep your pores healthy with naturally sanitized clothes

Dry cleaning making you sneeze?

This step can help reduce and eliminate that nasty toxic residue and odor left behind in your clothing by your cleaning solutions or by the dry cleaner.

A. Remove any plastic or paper wrap and hang the clothing in a closet or bathroom.

B. Place your EdenPURE™ as high as possible and blowing directly (if possible) on the clothing to be "bathed".

C. Turn your EdenPURE™ on high and fan on medium.

D. Make sure the back of your EdenPURE™ is clear and watch the cord as you close the door.

E. Allow this set-up to run for 1 to 2 hours depending on the smell. Again, let your nose

be your judge.

Cleaning Up Heating and Cooling With Purification! - This is your home's lungs.

This step takes the most time and is the most beneficial to you. Purifying your heating and cooling ventilation system could alone pay for your EdenPURE™. It costs up to \$700.00 across the country to have your home ventilation ductwork chemically treated to prevent infection and breathing disorders. This step alone will more than pay for your EdenPURE™ and is worth recommending to those you love! Your EdenPURE™ will help keep your house environmentally spic-n-span, continuously.

A. Just place your EdenPURE™ directly in front of and facing the cold air return or intake of your ventilation system.

B. Turn your EdenPURE™ on high and fan on low.

C. Now turn on your Heating/Cooling system fan for continuous operation.

D. Allow the set-up to run at least 12 hours or until you smell the sweet smell of Fresh Activated Oxygen coming out the vents farthest away from the central air/fan unit. The longer the better. You can let it run this way all day while you're away. If you do leave it on all day, open all your closet doors to freshen them up at the same time.

Tame Pet Odors

This step can help you reduce or eliminate that obnoxious smell that our loving pets sometimes leave us to deal with in our lives. This step can be amazing and is worth recommending to friends if they have pet odor problems. If you need to treat a whole room, follow the steps below.

A. Place your EdenPURE™ in front of and facing the problem spot directly on the floor.

B. Turn your EdenPURE™ on high and fan on low.

C. Make sure the back of the EdenPURE™ is clear, to allow good airflow.

D. Allow this set-up to run for 2 to 24 hours, or longer, depending on the smell. Let your nose be the judge.

Note: To purify a stinky spot on the carpet, cover the EdenPURE™ and the spot with a light sheet creating the tent effect as we did with your bedding. Remember to leave the back of the EdenPURE™ open.

Sound, healthy sleep environment

This step won't take long and has the potential to give you the best night's sleep ever! You spend one third of your life here. Your overall quality of sleep may be impacted by the freshness of your mattress. A mattress can be so filthy that it is illegal in some states to resell.

A. Simply pull the blankets back to expose the mattress and pillows.

B. Set the EdenPURE™ on the foot of your bed, pointed toward the headboard.

C. Turn your EdenPURE™ on high.

D. Cover your EdenPURE™ and your whole bed with a light sheet to make a "tent" over everything except the back of the EdenPURE™ (so it can breathe). This will concentrate the Activated Oxygen deep into your bedding to reduce or oxidize the gross stuff (dust mite excretion) in your beds that affects your breathing and thus reduces your ability to get a good night sleep.

E. Make sure to keep the back of your EdenPURE™ clear. Your EdenPURE™ must be able to draw air through it to produce Activated Oxygen properly.

F. Then close the door to the room and allow the EdenPURE™ to disinfect for 2 to 4 hours or all day while you're away, and then walk into an environmentally pure room.

Note: You will be tempted to sleep with the unit in your room. However, that is not necessary once the room is sanitized. You will normally get a smaller amount of O3 concentrations with the purifier when it is placed in its home place in a main living area. The higher concentration won't harm you, but those who are sensitive may find it annoying.

Mold Blast the Basement

This step will amaze you as your nasty, mold and mildew-smelling basement becomes transformed into a sweet smelling pleasant place to spend time. Now, you may have to run a dehumidifier if the basement environment is really damp. Mold and mildew love dampness.

A. Place your EdenPURE™ in the center of the basement about 5 to 6 feet above the floor or as high as possible.

B. Turn your EdenPURE™ on high and fan on high. Place an additional fan in the room if necessary to circulate the Activated Oxygen to every corner of the basement if the basement has poor airflow.

C. Allow the set-up to run for 6 to 8 hours for mild/moderate problems. Allow it to operate from 2 to 4 days if you have a serious problem basement. Remember, according to experts, if you can smell the mold or mildew, you could be at risk! So, lets remove and/or significantly reduce deadly mold!

Note: * For severely infected or damp areas; CONSIDER A SECOND EdenPURE™ Also remember: When you set up for initial purifying for purging purposes and when oxidizing mold you will normally smell a detergent-like smell resembling chlorine until there is a reduction breakthrough of the mold.

Hammer Remodeling Fumes

This step can help reduce and eliminate those hazardous toxic fumes and dust created in your home during and after you paint, lay carpet, install cabinetry or after almost any remodeling job! This procedure can be amazing and is worth recommending to friends that are also remodeling or building.

- A. Place your EdenPURE™ in the center of the room about 5 to 6 feet above the floor.
- B. Turn your EdenPURE™ on high and fan on medium.
- C. Place an additional fan in the room to circulate the Activated Oxygen to every corner of the room if the area has poor airflow.
- D. Allow this set-up to run for 2 to 24 hours, or longer, depending on the smell. Let your nose be the judge.

Note: * You may initially get a "bleach" smell, that's good! It tells you the O3 is transforming the toxins, chemicals and bacteria into pure oxygen, H2O, O2 and carbon dioxide.

Flush Your Bathroom

This step can help reduce that nasty mold and mildew, as well as help you keep those gross infectious microscopic bacteria and creatures from taking over your bathroom!

- A. Place your EdenPURE™ in the center of the bathroom about 5 to 6 feet above the floor.
- B. Turn your EdenPURE™ on high and fan on medium.
- C. Allow the set-up to run for 2 to 4 hours.
- D. This procedure should be repeated at least once per month to help maintain a safe and healthy bathroom. Also keep in mind that when you have the purifier on, it is for purging purposes and when oxidizing mold you will normally smell a detergent-like smell resembling chlorine until there is a reduction breakthrough of the mold. However, the EdenPURE™ does not produce Chlorine it only produces activated oxygen. This is the same natural process the sun and thunderstorms produce to clean up the outdoor air pollution.

Spring Clean the Closet

Oxidize chemicals from dry cleaning or smelly clothes in general

This step can help you reduce or eliminate that stale and old smell from all of your closets and storage units.

- A. Place your EdenPURE™ in the center of the closet or storage space up as high as you can get it. If what you're purifying is a small item like a chest or trunk, close the lid within 1 inch of fully closed. You must allow some fresh air in for your EdenPURE™ to work its best.
- B. Turn your EdenPURE™ on high and fan on high.
- C. Make sure the back of the EdenPURE™ is clear and watch the cord as you close the door.

D. Allow this set up to run for 1 to 2 hours depending on how fully you pack your closet or the size of the storage area. It is OK to run it all day.

Note: * For stinky, smelly shoes or a smoke drenched jacket, place the item in front of EdenPURE™ for an extra hour or so.
